Technical Data Sheet

Product description

Grindability good

Substrate GRP (glassfibre reinforced plastic), Steel, Aluminium, Galvanised steel

General product properties

Binder-Base unsaturated polyester resin, styrene containing

Gloss visually matt

Viscosity Paste-like

Density ca. 1,8 g/ml theoretical

Solid content in volume 100 % theoretical

Resistance to storage approx. 8 month in original packagings at an ambient temperature of 5 to 25 °C. Open

packages are to be used within a short time.

The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the intended application.

Application and processing

Pretreatment The substrate must be free of adhesion-impairing substances such as oil, grease, rust,

scale, mill scale, wax and release agent residues. The wood must be dry and capable of

bearing.

Note before useAn overdose of hardener could lead to changes of the color in the topcoat system.

Intensively mix the filler with the curing agent and apply it immediately. The processing and curing times are temperature-dependent and must be determined on site with approx.

100 g.

Mixin ratio + 2 % BPO Hardener, red or transparent

Processing conditions During processing, a room, material and mould temperature of [Variable] °C must be

guaranteed in order to prevent hardening problems and cracking.

Processing time Max. 4-6 min. / 20 °C

The processing time can decrease at higher temperatures/humidities and/or under

pressure.

Material usage 100 - 1000 g/m² mean test layer thickness theoretical

Dust drying after 10 minutes (degree of dryness 1) DIN EN ISO 9117-5

Full drying after 0,5 - 1 hours (pendulum damping) DIN EN ISO 1522

Cleaning of equipment with EFD cleaning agent 400312 within the processing time.

Comments	
Work-and Healthprotection	The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous goods, safety data and recommendations concerning Health and Safety at Work and environmental protection can be found in the corresponding safety data sheet.
Test conditions	All information is based on a standard climate 23/50 DIN EN 23270. All information is based on our product knowledge an experience. We have no direct influence on the application itself. Please do not hesitate to contact us for further information. The information provided here contains reference values and does not constitute a specification.
