Technical Data Sheet

PX6000D

FREOCRYL-Powder Coating

Product description

Product technology Powder coating for decorative use on exteriors

Application area e.g. in the construction and sanitary sector

Surface smooth

Gloss value tuff mat

Running properties good

Mechanical resistance

Scratch resistance

Resistance to light and

weather

good

good

good

General product properties

Binder-Base polyester acrylic

Colour All common colour shades

Gloss value tuff mat 3-8 GU, Angle 60° **DIN EN ISO 2813**

Density 1,2-1,7 g/cm3 depending on the shade theoretical

Resistance to storage approx. 36 month in original packagings at an ambient temperature of 5 to 25 °C. Powder

coatings must be stored in a cool and dry place.

The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the intended application.

Application and processing

The substrate must be free of adhesion-impairing substances such as oil, grease, rust, **Pretreatment**

scale, mill scale, wax and release agent residues. We recommend the use of suitable mechanical pre-treatment processes (e.g. blasting, grinding) or chemical pre-treatment

processes (e.g. phosphating) according to the requirements.

Recommended coating

thickness

60-80 um

theoretical **Material usage** approx. 0,1 kg/m2, layer thickness 70 µm

Processing Corona

Technical Data Sheet

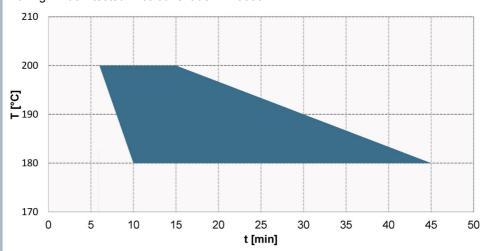

PX6000D FREOCRYL-Powder Coating

Curing

Recommended object temperature 10 min/180 °C. Baking window tested in colour shade RAL9005.

Objekt Temperatur in °C Object Temperature in °C	180	200
Haltezeit Minimum in Minuten Holding time minimum in minutes	10	6
Haltezeit Maximum in Minuten Holding time maximum in minutes	45	15

Note on curing

Coloured area = stoving conditions with good end properties

The displayed baking conditions are based on results from laboratory tests and therefore merely serve as a guideline when configuring the processing company's coating systems. The processing company is responsible for ensuring that the coating is fully cured. The complete curing of the coating must be checked by means of additional analytical and resistance tests using representative original parts under production conditions. Please do not hesitate to contact us if you require consultation.

Compatibility

Compatibility with other powder coatings must be checked.

Further processing of coated pieces

Touch-up coating on request. For details see EFD Info No. 4...

Chemical resistance

Influencing factors

The chemical resistance depends on the concentration, temperature, exposure time and test method. This has to be checked depending on the application.

Comments

Work-and Healthprotection

The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous goods, safety data and

recommendations concerning Health and Safety at Work and environmental protection

can be found in the corresponding safety data sheet.
