

PB1403F

FREOPOX-Powder Coating

Product description

Product technology	Powder coating for interior use
Application area	e.g. in the functional furniture and storage technology sector
Surface finish	Metallic effect
Surface	smooth
Gloss value	satin glossy
Running properties	good
Production process	bonded
Mechanical resistance	good
Scratch resistance	good

General product properties

Binder-Base	epoxy polyester resin	
Colour	All common colour shades	
Gloss visually	Satin gloss	
Density	1,2-1,7 g/cm ³ depending on the shade	theoretical
Resistance to storage	approx. 36 month in original packagings at an ambient temperature of 5 to 25 °C. Powder coatings must be stored in a cool and dry place. The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the intended application.	

Application and processing

Pretreatment	The substrate must be free of adhesion-impairing substances such as oil, grease, rust, scale, mill scale, wax and release agent residues. We recommend the use of suitable mechanical pre-treatment processes (e.g. blasting, grinding) or chemical pre-treatment processes (e.g. phosphating) according to the requirements.	
Recommended coating thickness	60-80 µm	
Material usage	approx. 0,1 kg/m ² , layer thickness 70 µm	theoretical
Processing	Corona	

Our technical data sheets are to provide you with advice based on our latest state of knowledge. This guidance does not release you from your own obligation to test our products for their suitability for your intended purposes and applications.

The sale of our products is in accordance with our terms of business, delivery and payment.

FREOPOX-Powder Coating

Curing

Recommended object temperature 10 min/160 °C.
Baking window tested in colour shade RAL9006.

Objekt Temperatur in °C	150	160	180
Object Temperature in °C			

Haltezeit Minimum in Minuten	20
Holding time minimum in minutes	

Haltezeit Maximum in Minuten	60
Holding time maximum in minutes	

Note on curing

Coloured area = stoving conditions with good end properties

The displayed baking conditions are based on results from laboratory tests and therefore merely serve as a guideline when configuring the processing company's coating systems. The processing company is responsible for ensuring that the coating is fully cured. The complete curing of the coating must be checked by means of additional analytical and resistance tests using representative original parts under production conditions. Please do not hesitate to contact us if you require consultation.

Compatibility

Compatibility with other powder coatings must be checked.

Further processing of coated pieces

Touch-up coating	on request. For details see EFD Info No. 4..

Mechanical tests

Sample description	On steel plate 60-80 µm layer thickness 10 minutes 160°C object temperature product PB1403FRA906	
Cross-cut-test	Gt 0	DIN EN ISO 2409
Cupping test	>6 mm	DIN EN ISO 1520
Impact-test	>80 kg cm (front)	DIN EN ISO 6272-1

FREOPOX-Powder Coating

Climatic tests

Sample description	On iron-phosphated steel plate product PB1403FRA906		
Condensate constant climate	Load duration	500 h	DIN EN ISO 6270-2 (CH)
	Detachment Cut	<1 mm	DIN EN ISO 4628-8
Neutral salt spray test	Load duration	240 h	DIN EN ISO 9227 (NSS)
	Detachment Cut	<1 mm	DIN EN ISO 4628-8

Chemical resistance

Influencing factors	The chemical resistance depends on the concentration, temperature, exposure time and test method. This has to be checked depending on the application.
