Technical Data Sheet

ER1912S_HE0092 FREOPOX-Primer

Product description

Product technology solvent-based 2-component coating

Application area e.g. in the vehicle construction sector

Application suitable as adhesion promoter

Absorption of spray mist good

Over-coating capability "Wet on wet" method

Corrosion protection very good

Substrate Steel, Stainless steel, Aluminium, Galvanised steel

General product properties

Binder-Base Epoxy resin

Colour in accordance with RAL 840 HR

other colours on request

Gloss visually matt

Viscosity 1400-2300 mPa*s, spindle 4, 60 revolutions/min. DIN EN ISO 2555

Density1,2-1,3 g/ml after addition of hardenertheoreticalSolid mass61-63 % after addition of hardenertheoreticalSolid content in volume43-45 % after addition of hardenertheoretical

Reference product The specified values refer to the product ER1912SRU735.

Resistance to storage approx. 24 month in original packagings at an ambient temperature of 5 to 25 °C. Open

packages are to be used within a short time.

The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the intended application.

Application and processing

PretreatmentThe substrate must be free of adhesion-impairing substances such as oil, grease, rust,

scale, mill scale, wax and release agent residues. We recommend the use of suitable mechanical pre-treatment processes (e.g. blasting, grinding) or chemical pre-treatment

processes (e.g. phosphating) according to the requirements.

Structure recommendation

Substrate Steel

Primer ER1912S

Mixing ratio 5:1 HE0092 Dry film thickness 70-90 μm

Technical Data Sheet

ER1912S_HE0092 FREOPOX-Primer

Top coat UR1449G

Mixing ratio 7:1 HU0140 Dry film thickness 40-60 μm

Note before use Prior to use, stir well or mix components homogeneously (e.g. with fast mixer).

Hardener HE0092

Mixin ratio Parts by weight 5:1

Volume parts 3,3:1

Thinning EFD dilution 400424

Processing conditions from 10 °C to

25 °C

Processing time max. 6 hrs. / 20 °C

The processing time can decrease at higher temperatures and/or under pressure.

Airless spraying as delivered viscosity after curing agent addition

High pressure spraying as delivered viscosity after adding curing agent

as delivered viscosity after curing agent addition

Material usage without application loss 220-240 g/m²

theoretical

Oven drying up to 80 °C possible (object temperature)

Air drying 20 °C, 50 % relative humidity

Dust dryingafter 30 minutes (degree of dryness 1)DIN EN ISO 9117-5Dry to the touchafter 5 hours (degree of dryness 4)DIN EN ISO 9117-5Full dryingafter 11 day/s (pendulum damping)DIN EN ISO 1522

layer thickness 80 µm after addition of hardener

Cleaning of equipment with EFD dilution 400424 within the processing time.

Further processing of coated pieces

Repainting after 20 min. / 20 °C with an intermediate drying time of =/>3 days / 20 °C, recoatability must be tested.

Comments

EFD info Further technical information can be found in the EFD Info. No. 170.

Work-and The standard personal Mealthprotection The standard personal materials. Detailed

The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous goods, safety data and

recommendations concerning Health and Safety at Work and environmental protection

can be found in the corresponding safety data sheet.

Test conditionsAll information is based on a standard climate 23/50 DIN EN 23270. All information is based on our product knowledge an experience. We have no direct influence on the

application itself. Please do not hesitate to contact us for further information.

The information provided here contains reference values and does not constitute a specification.
