Technical Data Sheet

PF1003F

FREIOTHERM-Powder Coating Facade

Product description

Product technology Powder coating for decorative use on exteriors

Application area e.g. in the building facade sector

Surface finish Metallic effect

Surface smooth

Gloss value satin glossy

Running properties good

Production process bonded

Gas furnace stability very good

Approvals

GSB Florida 1 141 c

Qualicoat P-1108

General product properties

Binder-Base polyester resin

Colour All common colour shades

Gloss visually Satin gloss

Density 1,2-1,7 g/cm³ depending on the shade theoretical

approx. 24 month in original packagings at an ambient temperature of 5 to 25 °C. Powder

coatings must be stored in a cool and dry place.

The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the intended application.

Application and processing

Pretreatment

The substrate must be free of adhesion-impairing substances such as oil, grease, rust, scale, mill scale, wax and release agent residues. We recommend the use of suitable mechanical pre-treatment processes (e.g. blasting, grinding) or chemical pre-treatment processes (e.g. phosphating, chromating) according to the requirements. For this we refer to the guidelines of Qualicoat, GSB and Qualisteelcoat.

Our technical data sheets are to provide you with advice based on our latest state of knowledge. This guidance does not release you from your own obligation to test our products for their suitability for your intended purposes and applications.

The sale of our products is in accordance with our terms of business, delivery and payment.

Technical Data Sheet

PF1003FFREIOTHERM-Powder Coating Facade

Recommended coating thickness

70-90 μm

Material usage

Processing

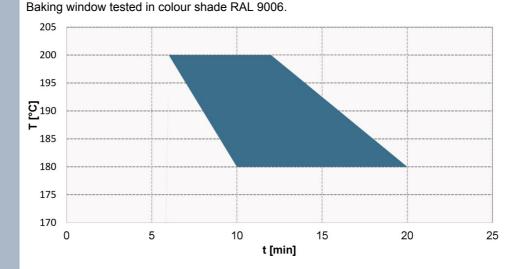

Corona

Curing

Recommended object temperature 10 min/180 °C.

approx. 0,1 kg/m², layer thickness 70 µm

theoretical

Objekt Temperatur in °C Object Temperature in °C	180	190	200
Haltezeit Minimum in Minuten Holding time minimum in minutes	10	8	6
Haltezeit Maximum in Minuten Holding time maximum in minutes	20	16	12

Note on curing

Coloured area = stoving conditions with good end properties

The displayed baking conditions are based on results from laboratory tests and therefore merely serve as a guideline when configuring the processing company's coating systems. The processing company is responsible for ensuring that the coating is fully cured. The complete curing of the coating must be checked by means of additional analytical and resistance tests using representative original parts under production conditions. Please do not hesitate to contact us if you require consultation.

Compatibility

Compatibility with other powder coatings must be checked.

Further processing of coated pieces

Touch-up coating

on request. For details see EFD Info No. 4..

Chemical resistance

Influencing factors

The chemical resistance depends on the concentration, temperature, exposure time and test method. This has to be checked depending on the application.

Comments

EFD info

Further technical information can be found in the EFD Info. No. 502.

Work-and Healthprotection The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous goods, safety data and

recommendations concerning Health and Safety at Work and environmental protection

can be found in the corresponding safety data sheet.

Test conditions

All information is based on a standard climate 23/50 DIN EN 23270. All information is based on our product knowledge an experience. We have no direct influence on the application itself. Please do not hesitate to contact us for further information.

The information provided here contains reference values and does not constitute a specification.
