Technical Data Sheet

GS9141H_HU0010EFDEDUR-System-Structure Coating

Product description

Product technology solvent-based 2-component coating

Surface Different structures are possible depending on application and viscosity.

Application For interior and exterior applications

Property Silicone-free

Drying quickly

Full drying fast complete drying

System coating structure possible (see information)

Standard-System GS1041

Substrate Steel, Aluminium

General product properties

Binder-Base Acrylic Resin

Colour according to FreiLacke reference sample

Gloss visually according to FreiLacke reference sample

Viscosity 3000-8000 mPa*s, spindle 6, 60 revolutions/min. DIN EN ISO 2555

Density1,20-1,40 g/ml after addition of hardenertheoreticalSolid mass64-72 % after addition of hardenertheoreticalSolid content in volume52,5-55,5 % after addition of hardenertheoretical

Reference product The specified values refer to the product GS9141HB2364.

Resistance to storage approx. 24 month in original packagings at an ambient temperature of 5 to 25 °C. Open

packages are to be used within a short time.

The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the intended application.

Application and processing

Pretreatment The substrate must be free of adhesion-impairing substances such as oil, grease, rust,

scale, mill scale, wax and release agent residues. We recommend the use of suitable mechanical pre-treatment processes (e.g. blasting, grinding) or chemical pre-treatment

processes (e.g. phosphating) according to the requirements.

Structure recommendation

Substrate Steel

Top coat GS9141H

Mixing ratio 10:1 HU0010
Dry film thickness 70-90 μm

Technical Data Sheet

GS9141H_HU0010EFDEDUR-System-Structure Coating

Note before use Prior to use, stir well or mix components homogeneously (e.g. with fast mixer).

Hardener HU0010

Mixin ratio Parts by weight 10:1 HU0010

Volume parts 8:1 HU0010

Thinning EFD dilution 400320

EFD dilution 400500

Processing conditions from 10 °C to 25 °C

Processing time max. 6 hrs. / 20 °C

The processing time can decrease at higher temperatures and/or under pressure.

High pressure spraying Following the addition of the curing agent, set the processing viscosity in accordance with

the respective application process. Depending on the desired texture, the application

takes place in one (self-forming texture) or in two operations (sprinkle effect):

1.) Self-forming texture (one operation)

e.g. Sata jet® Nozzle 1,5-2,0 mm

Spray pressure 3-5 bar

Cross coats 1-2

2.) Sprinkle effect (two operations A + B)

e.g. Sata jet® Nozzle 1,5-2,0 mm

Cross coats 1-2

A) Spray pressure 3-5 bar, smooth pre-spraying

following the drying of the coating surface (approx. 30 min. / 20°C)

B) Sprinkle the desired texture using reduced spray pressure

Spray pressure 0,5-2,0 bar

By changing the spray pressure, nozzle diameter, coating viscosity, spray guns and system setting, different surface textures can be achieved. Any wearing of the nozzles

e.g. with microfibre roll

and system must be taken into account.

Additional application options must be tested.

Electrostatic possible, system-specific

Material usage without application loss 190-210 g/m² theoretical

layer thickness 80 µm after addition of hardener

Oven drying up to 100 °C possible (object temperature)

rolling/painting

Air drying 20 °C, 50 % relative humidity

Dust drying after 30 minutes (degree of dryness 1) DIN EN ISO 9117-5

Dry to the touch after 5 hours (degree of dryness 4) DIN EN ISO 9117-5

Full drying after 8 day/s (pendulum damping) DIN EN ISO 1522

Cleaning of equipment EFD dilution 400500

Technical Data Sheet

GS9141H_HU0010EFDEDUR-System-Structure Coating

Comments

Liability test	Recommended performing adhesion tests if substrates painted differ from those mentioned in the product description.
System Coating	Can be integrated into the system coating concept as a horizontal system coating (different coatings with the same look) or vertical system coating (part of a multi-layer structure). For more information, see www.freilacke.de/systemlacke.
Work-and Healthprotection	The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous goods, safety data and recommendations concerning Health and Safety at Work and environmental protection can be found in the corresponding safety data sheet.
Test conditions	All information is based on a standard climate 23/50 DIN EN 23270. All information is based on our product knowledge an experience. We have no direct influence on the application itself. Please do not hesitate to contact us for further information.
	The information provided here contains reference values and does not constitute a specification.
