Technical Data Sheet

DURELASTIC-PU-Top Coat

Product description

Product technology Solvent-free 2C-PU coating

Resistance to light and

weather

very good

Chemical resistance Good, against weak acids and bases, as well as alcohols, colourants and oxidising

agents.

Substrate CFRP (carbon fiber-reinforced plastic), mineral

General product properties

Colour colourless

Viscosity ca. 1200 mPa*s

Density 1,20 g/ml theoretical

Solid mass ca. 100 % after addition of hardener theoretical

Resistance to storage At least 12 months in original packaging in case the original packaging stored tightly

closed at 5 to 25 °C.

Opened packagings must be processed quickly.

The best-before date of the respective batch is indicated on the product label. Storage beyond the specified period does not necessarily mean that the product is unusable. However, it is essential to check the properties required for the respective application in this case for quality assurance reasons.

Application and processing

Pretreatment The substrate must be free of adhesion-impairing substances such as oil, grease, rust,

scale, mill scale, wax and release agent residues. An adhesive primer may be required.

Structure On carbon fiber-reinforced plastic: CFRP

recommendation

Note before use Prior to use, stir well or mix components homogeneously (e.g. with fast mixer).

In order to prevent mixing errors, repotting the mixed material is recommended.

Contact with water and solvents must be avoided before and during the mixing process. Even small quantities will accelerate the curing process. (= reducing the processing time)

Hardener HD0233

Mixin ratio Parts by weight 100 : 66

Thinning EFD dilution 400450

Processing conditions from > 15 °C to 40 °C

Processing time Max. 8 - 15 min. / 20 °C

The processing time can decrease at higher temperatures/humidities and/or under

pressure.

Our technical data sheets are to provide you with advice based on our latest state of knowledge. This guidance does not release you from your own obligation to test our products for their suitability for your intended purposes and applications.

The sale of our products is in accordance with our terms of business, delivery and payment.

Technical Data Sheet

BD7287VDURELASTIC-PU-Top Coat

Airless spraying

Following the addition of the curing agent and approx. 10-30 % dilution

Rolling

as delivered viscosity

Material usage

200 - 1000 g/m² mean test layer thickness

theoretical

Cleaning of equipment

Immediately with organic solvents, hardened residues can only be removed mechanically.

Comments

Work-and Healthprotection The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous goods, safety data and recommendations concerning Health and Safety at Work and environmental protection can be found in the corresponding safety data sheet.

Test conditions

All information is based on a standard climate 23/50 DIN EN 23270. All information is based on our product knowledge an experience. We have no direct influence on the application itself. Please do not hesitate to contact us for further information.
